

UPS SurePost®

A B2C Economy Solution that Beats the Competition

Combining the reliability, consistency and speed of the UPS® ground network with final delivery from the U.S. Postal Service, UPS SurePost provides an economical, easy-to-use shipping solution for Unishippers customers' lightweight, low-value and residential shipping needs.

UPS SurePost is a smart solution when your shipments:*

Are primarily B2C and bound for a residential address

Are small and lightweight — generally less than 10 lbs. in weight or one cubic foot in size

Have a value of less than \$100 and require limited liability coverage

Don't require urgent or guaranteed delivery times

ups Authorized Reseller

With SurePost, you don't have to compromise quality for cost, either. It beats the other competitive postal solutions with:

Consistent time-in-transit

Although not a guaranteed service, you can easily estimate and communicate delivery times to your customers knowing that SurePost's time in transit is UPS® Ground plus one to two days in the 48 contiguous U.S. states. Off-shore shipments have additional transit time.†

Integrated shipping & tracking

With the convenience of preparing SurePost shipments alongside your other small package shipping on UPS's systems, plus the ability to track packages with any UPS tracking tool, SurePost adds transparency for your customers and simplifies your shipment creation process.

Smart shipment matching

UPS uses smart technology to match, or "redirect," approximately 35% of SurePost shipments with other packages that are bound for delivery to the same address on the same or next business day. With redirection, your package stays within the UPS network for final delivery versus being transferred to the USPS network.
