

UPS Ground Saver®

A B2C Economy Solution that Beats the Competition

UPS Ground Saver® provides an economical, easy-to-use shipping solution for Unishippers customers' lightweight, low-value and residential and commercial shipping needs.

UPS Ground Saver® is a smart solution when your shipments:*

Are primarily B2C and bound for a residential and commercial address

Are small and lightweight — generally less than 10 lbs. in weight or one cubic foot in size

Have a low economical value and requires limited liability coverage

Don't require urgent or guaranteed delivery times

With UPS Ground Saver®, you don't have to compromise quality for cost, either. It beats the other competitive postal solutions with:

Consistent time-in-transit

Although not a guaranteed service, you can easily estimate and communicate delivery times to your customers knowing that UPS Ground Saver®'s time in transit is 1-5 days with roughly 75% delivered within 3 days (or UPS® Ground plus one to two days) in the 48 contiguous U.S. states, where the service is available.

Integrated shipping & tracking

With the convenience of preparing UPS Ground Saver® shipments alongside your other small package shipping on UPS's systems, plus the ability to track packages with any UPS tracking tool, UPS Ground Saver® adds transparency for your customers and simplifies your shipment creation process.

Authorized
Reseller

*This is not a guarantee of service. Availability of and eligibility for UPS Ground Saver® will depend on certain qualifications, including shipment volume, approval by UPS and other factors to be addressed by your Unishippers representative.
